

REFLEX EZ-LATCH™

Self centralising spearpoint with anti-jam latch system.

Fed up with bad ground, broken wirelines or jammed core tubes? The REFLEX EZ-LATCH™ is a next generation upper head assembly, designed to alleviate problems with an exclusive dual pin “parallel latch retraction action”, significantly reducing resistance against the locking coupling.

Traditional core barrel upper head assemblies utilise a “single pin” latch retraction system that creates an arc action during release. The greater the pressure in the core tube (created by broken or blocking core), the more resistance against the locking coupling when attempting to release, increasing the chances of a jammed core tube or broken wireline.

Can You Afford Not To Use REFLEX EZ-LATCH™?

Eliminating one rod trip easily covers the initial tool outlay. One snapped wireline prevention can pay for several tools.

Further Information

For more information please go to our website www.reflexnow.com or contact your nearest REFLEX office.

Additional Benefits

- Self-centering Posi-Connect spearpoint – minimising overshoot mis-latch
- 360° spearpoint rotation, 120° arc with 3 detent positions
- One tool covers N and H, with another covering H and P core diameters, meaning reduced inventory and outlay
- Robust and lightweight design with quality steel for maximum component life
- Reliable spearpoint connection – factory press-fit assembled for assured connection
- Upgraded latch and latch pin design for greater endurance in the field
- Compatible with all brands of running gear
- Posi-Connect spearpoint available separately to upgrade existing head assemblies.
